

## Highlights Box-Version 5500 kg

- Highest comfort in its weight class
- Passage from cab to rear
- Workbench for field repairs
- Everything at a glance in the command room
- Large tailgate as rain cover with lighting
- Plenty more storage space than panel van
- New ergonomic TEG-Keyboard
- All-round lighting for night work
- Double cable drum for efficient work
- Mobile system with trailer: Good accessibility in narrow streets
- Open extension: maintenance accessible everywhere, easy replacement of components
- Over 300 liter water tank possible, with heated water system for use in winter
- 

### Maximum comfort for operators

The box body is clearly superior to the van in terms of space and comfort. The box fits on almost all chassis with at least 5000 kg total weight. The straight walls offer more space and better possibilities to place the equipment. The command compartment can be turned 90° and allows a passage to the rear compartment. The operator can enter the command room directly from the rear or the driver's cab. In heavy traffic, this not only ensures safety, but also enables stress-free work.

### Modern control room

The control room can be set up individually according to the customer's wishes. The new TEG-Keyboard makes work much more pleasant for the operator. All important instruments are visible at a glance. To ensure concentration, the operator can completely close and darken the control room.

### More space, more possibilities

The unit offers plenty of space, which makes it possible to install a small workshop in the vehicle. Equipped with a workbench and sufficient storage space for tools, field repairs are no problem. Depending on the customer's needs, a resin mixer and/or a resin press can also be mounted instead of a workbench. The all-round lighting simplifies work at night and the large tailgate provides better protection in the rain. Thanks to the double drum, work is efficient. This means that the trowel robot can be prepared during the milling operation.

### Customised vehicle equipment

The complete vehicle equipment is realised in cooperation with experienced operators and the customer. KA-TE PMO AG is increasingly specialising in individual solutions tailored precisely to customers' needs. Do not hesitate to send us an inquiry. We will gladly respond to your individual requirements.
