

### Cost-optimised compact system for export

The Compact Basic system is simple and cost-optimised. Compared to the Compact system, the units are individual to provide more flexibility for installation. It contains only what is necessary for the operation of the robots. It was developed for customers who are looking for a cost-effective solution or who want to dismantle a 3500 kg vehicle. The system is ideal for export, where on-site upgrading is ideal. A sewer rehabilitation vehicle can be realized with little investment.

#### The system consists of:

- Cable drum with separate cable pulling arm
- Hydraulic power unit
- control cabinet
- Control & remote control
- Compressor
- Water tank 210-325 liter
- Water pump
- Optional: slewing crane

The customer can define the installation in the vehicle himself. We will gladly prepare a CAD concept for planning within a few days. Installation with a KA-TE technician is possible. Do not hesitate to contact us.
