

New generation

The TEG-Keyboard was developed especially for the new generation of operators. The keys and their switches originate from the gaming industry. They have been specially designed to cope with the millions of switching cycles and extreme speeds. They are also extremely robust and cost-optimised. The tactile force has been selected for use in sewer rehabilitation. The keys are numbered F1-10 and illuminated. Additional functions are controlled with the shift key, which is operated comfortably with the thumb. The functions are structured very logically. With the introduction of a second joystick, we give the operator an optimal feel for the robot. The TEG keyboard is compatible with old systems, so even older systems can benefit from this modernisation.

Do not hesitate to send us a request for a quotation.

Highlights

- Modern and functional design
- Ergonomic
- Illuminated keys
- Keys from the gaming industry
- Simple key combination
- Free position on desk
- Robust
- Cost effective spare parts
- Operation can be learned in a few hours
